

A1-A10 : Short Training Sequence (16 Samples each)

C1-C2 : Long Training Sequences (80 Samples each)

CP: Cyclic Prefix, 16 Samples for each OFM Symbol

Fig.1. IEEE 802.11p physical layer training symbol structure used for packet detection, channel estimation, and synchronization. The short training symbols (A1–A10) and long training symbols (C1–C2) form the core preamble.

Fig. 2. Two long preambles and pilot subcarriers in time and frequency typically located at subcarrier indices -21 , -7 , $+7$, and $+21$ depicted visually

Figure 1. Description of the tested OFDM-based sensing scenario: matrix Y of received carrier states is decoded, based on real measurements, while matrix X of transmitted carrier states is assumed to be known (as in the base station).
